CapSAICIN, and related compounds known as capsaicinoids, give chilli peppers their heat when they are eaten. The capsaicin in chilli peppers excites pain receptors on your tongues, making chilli taste hot.

How and why do we measure the chilli heat of food? - Campden BRI

What makes chillies hot? Capsaicin is the main substance in chilli peppers that provides the spicy heat. It binds to receptors that detect and regulate heat (as well as being involved in the transmission and modulation of heat).

Why are chillis spicy for humans, but not for birds?
